

Interested in managing a project from A to Z in a stimulating technical environment, as a part of a growing international company?

We are hiring **R&D Electronics Engineer (M/F)**

## Position

- Study and/or establish specifications and feasibility of client solutions (conception of new products (communications sensors) or adapt current solutions to new needs)
- Identify relevance and present different alternatives to consider in order to meet these specifications
- Design, develop and implement solutions integrating sensor, microcontroller, power supply and communication
- Design and conduct necessary tests for validation/qualification of (sub) systems.

## Profile

- Electronics engineer, (HW, FW) with minimum 3 years' experience in development/industrialisation of new electronic products
- Experience in metrology, sensors, real time measuring
- Experience in new product design project from A to Z, starting from the specification phase, to complete qualification through industrialisation.
- Spirit of analysis and synthesis
- Solution and result oriented
- Creative spirit and open to discover new ideas and new technologies
- Able to work autonomously having a team spirit
- Skills in CAD Schematic and PCB (if possible Altium)
- Skills in testing and electronic prototyping (debugging hardware & software, ...)
- Experience in Embedded Software (C, Java)
- Good level of written and spoken English
